EDUCATION

SUNY - Stony Brook University

August 2024 – May 2026

Master of Science, Computer Engineering, GPA: 3.95/4.00

Stony Brook, NY

- Machine Learning, Deep Learning Algorithms, Computer Vision, Digital Image Processing, AI

University Of Pune

August 2020 – May 2023

Bachelor of Engineering in Computer Science, GPA: 9.37/10.00

Pune, India

- Natural Language Processing, OOP, Data Structures, Distributed Systems, High Performance Computing

TECHNICAL SKILLS

AI/ML: PyTorch, TensorFlow, Hugging Face, OpenAI Whisper, Scikit-learn, NLP, LLM, Transformer Architectures

Programming: Python, Java, C/C++, JavaScript/TypeScript, SQL, MongoDB

Tools: GCP, Docker, Kubernetes, AWS, Azure, Git, Jira, Android Studio, Figma

EXPERIENCE

Graduate Research Assistant - Stony Brook University, NY, USA

July 2025 – Present

- Introduced a ML model for EMI terminal modeling, predicting source impedance with 82% lab correlation
- Integrated Fast Fourier Transform (FFT) to strengthen EMI analysis, which cut down on analysis time by 20%, and made validation of reconstructed signals using Inverse FFT
- Proposed Python-based machine learning pipelines leveraging NumPy, SciPy, and scikit-learn for robust data preprocessing, model training, and rigorous validation, enhancing power electronics integration by 2.7%

Software Engineer - Persistent Systems, Pune, India

August 2023 – April 2024

- Developed and launched CodeHealth, an AI-based code review platform using LLMs, Python & React on AWS & Azure, which analyzed 50,000+ LOC and flagged potential vulnerabilities, reducing code quality issues by 15%
- Integrated OpenAI APIs with custom prompts to assess code quality, reducing manual review time by 2 hrs/week
- Spearheaded the creation of 35+ configurable coding rules, enabling teams to customize linting based on standards
- Accelerated development cycles by 25% by integrating GitHub Copilot & Amazon CodeWhisperer into the SDLC

Machine Learning Engineer - S3 IT Service, Pune, India

July 2022 – July 2023

- Developed backend systems using Python/Flask and frontend PWAs with Angular/Svelte, serving 1M users
- Built a recommendation engine using correlation analysis and clustering, and a Random Forest Classifier to evaluate customer credit history and assign credit scores, which improved the speed of creditworthiness evaluation by 18%
- Deployed Docker and Kubernetes configurations, ensuring high availability, scalability and smooth operations
- Automated reconciliation of 2,000+ transaction discrepancies, performed root cause analysis (RCA) and contributed to the full SDLC (source control management on GitLab, code reviews, unit and A/B testing)

PROJECTS

Audio Transcription for speech impaired | *Python, Whisper, PyTorch, Hugging Face* May 2024 – March 2025

- Fine-tuned OpenAI Whisper using PyTorch and Hugging Face Transformers to improve speech-to-text for people with Dysarthria, creating both general and user-specific models
- Improved Word Error Rate (WER) by 50% with general models and up to 80% with user-specific models
- Implemented a two-step training method to achieve an additional 10% improvement in WER
- Adapted the open-source Whisper-live project for real-time transcription of these models

Blackjack Counting Cards using Reinforcement Learning | *Python, PyTorch*

December 2024

- Applied Deep Q-Learning and State-Action-Reward-State-Action (SARSA) algorithms to train an agent in a custom OpenAI Gymnasium environment

Smart Health Monitoring System | *React Native, Python, React.js, Figma, Firebase*

August 2023 – June 2024

- Engineered a real-time health monitoring system utilizing IoT sensors to capture patient data, achieving a 15% improvement in early disease prediction accuracy via machine learning models
- Designed a React Native mobile application for patients & a web portal for doctors facilitating efficient data access
- Published a research paper titled “IoT-Based Health Monitoring System” in the IJRASET (Vol. 10, Issue XI, ISSN: 2321-9653), detailing the integration of sensors and devices for machine learning-driven disease prediction and real-time data collection
